7-STEP REVIEW FLOW

STAGE 01
Understand the request
Classified this as Count.

STAGE 02
Resolve business terms
Resolved business terms for Employees.

STAGE 03
Match relevant data
Matched Employees.

STAGE 04
Plan the query
Prepared a read-only plan with the matched business data.

SQL Repair

Correct read-only SQL, identify syntax problems, and understand reported database connection errors.

Check a SQL statement

Paste a statement and, if available, the database error that was returned.

SQL (standard)

SQL statement

```
SELEC employee_id FROM employees
```

Database error (optional)

```
For example: ORA-12541: TNS:no listener, connection refused, timeout, or authentication error
```

The checker does not open a database connection or execute SQL.

Check and correct

Repair result

Syntax, safety, and reported connection findings.

Ready to review

VALIDATION

Syntax parsed successfully.

CORRECTED STATEMENT

Copy

```
SELECT employee_id FROM employees;
```

STATEMENT FINDINGS 2

warning **Common syntax issue corrected**

Corrected the SELECT keyword.

info **Statement terminator added**

Added a semicolon to complete the statement.

CONNECTION DIAGNOSTICS

Add the database error message above to diagnose listener, port, DNS, timeout, or sign-in problems.

Connection guidance stays safe

Built for clear, trusted data exploration

- Plain-language questions to read-only SQL
- NVIDIA structured generation with schema grounding
- Visible review scorecard and seven-stage workflow
- SQL Repair for syntax and connection troubleshooting
